

...“It just feels clean”...

Gentle hygiene for bottles,
toys and surfaces.

Understanding Life.

...“I’m strict about cleanliness. But with you ... I’m still learning.”...

Effective against germs – gentle to your baby: NUK Cleaning Range.

As soon as there is a baby living in the household, there are questions which you likely never had before: how often do I have to wash my hands or boil the soother? What do parents do when their children start to explore the whole world with their mouths?

One thing is for sure, hygiene takes the highest priority in the first six months of life. The immune system is still in the process of developing and very susceptible to infections. Everything that your baby touches should therefore be cleaned well: the soother, the bottles as well as the surfaces and objects in daily use.

With the NUK Cleaning Range, you can effectively prevent transferring harmful germs and diseases – without any misgivings. For all the products make use of the cleaning power of natural-based ingredients. For baby-soft hygiene in every baby household.

Nice and clean, feeling good: NUK Hygiene Tips.

With the NUK Cleaning Range you can protect your baby's health at home – if you follow a few basic hygiene rules:

- Each time before using or sterilising, clean everything you need for breastfeeding or feeding. Teething rings and soothers too.
- Check that all the toys and objects your baby's mouth will get to enjoy are clean. Anything that falls on the floor should be disinfected when required.
- Clean and disinfect the changing mat and the surrounding surfaces every time after use. There are a lot of germs lurking around especially in the nappies.
- And just as important: wash your hands regularly, especially before preparing baby food, breastfeeding or feeding.

Completely gentle: NUK Baby Bottle Cleanser.

Milk, food solids, juice: what's left after feeding can be very stubborn. Above all milk proteins can establish themselves quickly in teats, bottles or breast pumps. The NUK Baby Bottle Cleanser helps to prevent the build-up of germs and smells, by letting nature do the work: enzymes break down any food remains so that they can be removed without any problems or residues. Without scrubbing or soap residue. And making it safe for your baby.

NUK Baby Bottle Cleanser

With natural-based ingredients and free of perfumes and dyes. All the active ingredients are pH-neutral, swiftly biodegradable as well as easy to rinse away leaving no trace.

NUK Baby Bottle Cleanser Refill Pack

Easily refill your bottle of NUK Baby Bottle Cleanser. Resealable and making ecological sense.

Thorough right the way through: NUK Washing-Up Range.

Babies are so hungry! In the course of a day that can amount to quite a few bottles and teats. And they all have to be thoroughly cleaned after every feed. So that you do this as quickly and as easily as possible, NUK is at hand – with the NUK Teat Cleaning Sponge and the NUK 2-in-1 Bottle Brush. Both were specially designed to suit the special shapes and materials of baby bottles and teats. For optimal cleanliness whatever the shape.

NUK Teat Cleaning Sponge

Soft and specially shaped for cleaning silicone and latex teats, the ring grip can be held securely while the practical base lets it dry hygienically.

NUK 2-in-1 Bottle Brush

With flexible, sturdy bristles for being particularly thorough as well as with an extra, small teat brush for clipping onto the ergonomically-shaped handle.

NUK Vapo Rapid

For disinfecting bottles, teats and breast pump accessories. So it is advisable not just to clean bottles, teats and breast pump accessories, but to disinfect them too. The NUK Steam Steriliser disinfects in just eight minutes six bottles at the same time – using just steam.
